Interview, Coding, & Summary

	Interview transcript	Codes
Do you usually use bookmark services?	These days, I use Facebook "Save" the most. About 20-30 a day. There are IT experts who filter good information and share it on FB.	Filtered informations by experts
If you bookmark, do you use any bookmarking aid service? / Do you use any similar bookmarking services? (e.g. Pinterest)	FB save, Pocket, One Tab, Evernote Clearly... Each has its own merit. But mostly FB save because it is easy to do and the contents are already filtered.	Simple approach. (Do not use extended service that goes outside of current service)
Why do you bookmark?	I want to see them later. They are worth revisiting. Because if I don't miss this opportunity to bookmark, I may not see this information again. It's good to have once-filtered information.	Want to read later. Opportunity to save filtered informations.
When do you use bookmark again?	Whenever I have time, about 1-2 hours a day in total. Too much accumulation has been a problem. I feel like this is due to my lack of willpower, rather than functional problem.	Use of short breaks Involuntary (Lack of will power)
How do you return to bookmarks? (What process)	Because I rely on FB these days, I check 'Save' page on FB to see what I've bookmarked.	Simple approach (FB Save page)
If you don't return to the bookmarks, how would you be led to return?	It is true that I end up not reading them at all. So I used other applications like IFTT(As part of To Do and it notifies me. The accumulated notification numbered bothered me badly.) and Read Quick(It shows each word on the screen. I am forced to focus and read whole article). It still didn't work for me. Bookmarks accumulate, still.	Part manual, part involuntary approach (Involuntary measures like notification and forced attention grabbing failed)

SUMMARY NOTES **Part voluntary, part involuntary**

He tries to revisit the bookmarked information, but is not successful because he bookmarks more than he voluntarily reads. He finds there is a need for involuntary measures to push him a little to read, given they are not too forceful. Still, in the end, it has to be him who decides to read.

Pattern & Persona

LET'S COLLECT Squirrels

- Bookmarks contents like a collection.
- Bookmarks from diverse sources.
- Bookmarks more than the sites they often visit.
- Bookmarks so they can return later.
- Just lets the bookmarks pile up and tends to not organize.

Scenario & Journey Map

In bus

Hyunjung opens the B-slide application to add her Facebook account into the synced account list, where she already has Chrome and Twitter accounts

In bus

She decides that it would be good to read some materials in the evening. She sets B-slide lock-screen time to 7 PM to 11PM.

At home

At 7 PM, the lock-screen displays bookmarked contents. The first card contains the title Virtual Reality with Youtube, with a brief summary of the contents and one image.

At home

She recalls adding this contents to FB save. Since she has time to read until she goes to bed, she decides to read it. After 11PM, the lock-screen returns to default state.

What I learned from Stack Overflow's massive survey of 64,000 developers

Developers work in a wide variety of industries—most of them outside of what we traditionally call “tech.”

Two-thirds of them got their current job through someone they already knew, or were approached by a recruiter.

23,737 responses

Only 5.4% are actually unemployed and looking?

Employment Status

How Do Developers Feel About Their Jobs and Careers?

Job Satisfaction

Career Satisfaction

Not so hasty!

While developers are quite happy with their jobs,

they are still OPEN to better jobs

Job Search Status

I'm not actively looking, but I am open to new opportunities

I am not interested in new job opportunities

I am actively looking for a job

**Yup, open,
but not ‘actively’ open.
More of ‘passively’ open.**

How Did Developers Find Their Current Job?
